Evolphin
Zoom VideoFX

Incorporate native HD/4K/8K/VR video content into your post-production workflows

Plugins for Premiere Pro, After Effects, and Cinema 4D to search, import, export, & more

1-click export to Evolphin Web Collections for collaboration and review on mobile or desktop

1-click switching between low-res proxies and high-res versions using Premiere Pro

Bring your non-linear video editing apps, infrastructure, and systems without vendor lock-in

Automate ingestion, archiving, and more with customizable workflows
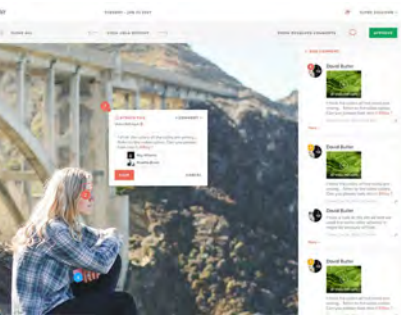

CONTENT INGEST MODULE

- Setup custom ingest rules on incoming native high-res videos
- Enforce mandatory metadata and custom fields
- Automatically organize high-res footage based on metadata
- Route incoming high-res assets via high-performance Fiber channel instead of Ethernet
- Integrate with leading hardware transcoders for automatic proxy and mezzanine creation upon ingest
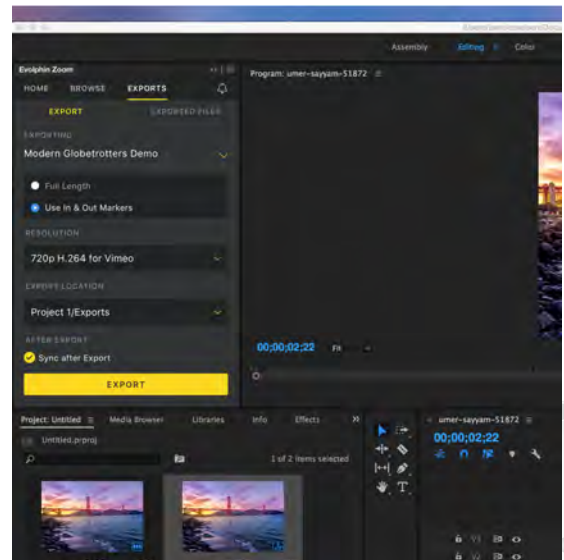

ADOBE PREMIERE PRO AND AFTER EFFECTS PLUGINS

- Search for and import content directly into Adobe apps via Zoom plug-ins
- Switch between the native high-res versions, mezzanine and low-res video proxies with a single click
- Drag and drop assets from Zoom Adobe plugins directly into your project
- After syncing a project, the MAM shows what assets it linked to for easy content management
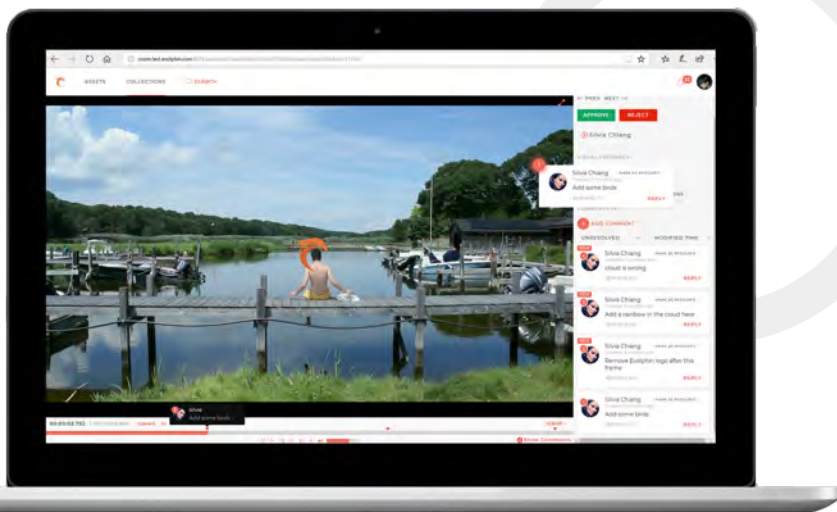

MAM INTEGRATION

- Built-in integration with Evolphin Zoom MAM stack
- Manage all media and documents, including high-res video, audio, images, motion graphics, 2D, 3D, and text assets
- Setup direct asset/external asset management or hybrid model based on customer driven rules
- Evolphin Collections and Web Client enable external clients to review and collaborate with internal teams

ARCHIVE MANAGEMENT

- Easily move high-res videos and their project dependencies between disk storage and tape/cloud storage
- Preview large archived assets before restoring them
- Archive to choice of destinations including SGL/Oracle DIVA/S3/Cloudian/StorageDNA
- Automate archive tasks so users don't need to know where content is to work with it

FRAME-ACCURATE VIDEO METADATA

- Make timecode-accurate notes in a Web Collection for editors to respond to instantly in their editing app
- Apply IPTC and project specific metadata fields to any frame for quick searching
- Search for clips based on chapter or frame metadata inside a video
- Automatically extract chapter or per-frame metadata from supported containers like QuickTime

SYSTEM REQUIREMENTS

- System requirements are described on our help site: https://goo.gl/RTzw4A

ABOUT EVOLPHIN AND ZOOM

Evolphin Software is the first of its kind in Rich Media Asset Management. Zoom leverages the industry's first high-performance in-memory deduplication of content, allowing users to create, share, and collect insights, and provide rich media to their clients in the fastest way possible. See Zoom in action for a different approach to media workflow management that will make you re-think conventional wisdom with a new generation of products and capabilities. Companies around the globe, covering the Advertising, Broadcasting, Media/Entertainment, Retail, and Healthcare industries, currently deploy Zoom.
